Stainless Steel Chain (SS/SSK)

Roller Chains for Dower Transmission

Excellent resistance to corrosion and heat that allows use in almost everywhere

There are two types of Stainless Steel Chain: SS and SSK. The SS type has the highest resistance to corrosion and heat. However, it is made entirely of austenite stainless steel and thus its tensile strength is slightly lower than 70% of a standard roller chain, and maximum allowable load drops to a little over 10%.

The SSK type has 1.5 times higher maximum allowable load compared to the SS type. Select SSK when you need more strength than SS, or desire longer product life.

Both types have equivalent corrosion resistance.

Recommended uses

- Conditions exposed to mild alkaline and mild acidic chemical agents, sea water and wastewater. Various chemical plants and water treatment plants.
- Conditions of high temperature
- Heat-treating furnaces, dry furnaces, incinerators

Maximum allowable load (Double pitch)

	Maximum allowable load							
	S	S	SSK					
	kN	kgf	kN	kgf				
DID C204055 DID C204255	0.44	45	0.69	70				
DID C2050SS DID C2052SS	0.69	70	1.03	105				
DID C2060HSS DID C2062HSS	1.03	105	1.57	160				

Average tensile strength and maximum allowable load (Single pitch)

SS

Chain No.	Average stre	e tensile ngth	Maximum allowable load				
	kN	kgf	kN	kgf			
* DID 25SS	3.33	340	0.12	12			
* DID 3555	7.55	770	0.26	26			
DID 40SS	13.3	1,350	0.44 45				
DID 50SS	20.9	2,120	0.69	70			
DID 60SS	30	3,050	1.03	105			
DID 8055	53.4	5,420	1.77	180			
DID 100SS	82.3	8,360	2.55	259			

Note: Those marked with * indicate bushing chains.

SSK

Chain No.	Average stre	e tensile ngth	Maximum allowable load			
	kN	kgf	kN	kgf		
DID 40SSK	13.3	1,350	0.69	70		
DID 50SSK	20.9	2,120	1.03	105		
DID 6055K	30	3,050	1.57	159		
DID 8055K	53.4	5,420	2.65	269		

Selection of chains

Stainless Steel Chain has lower average tensile strength and maximum allowable load compared to the standard roller chain. Please refer to the maximum allowable load chart in the previous page and p122~124 for chain selection.

Connecting links and offset links

RJ type connecting links are used for Stainless Steel Chains #60 or smaller and CJ type connecting links for #80 or larger. 2POJ offset links are used for sizes #25, and OJ links for all other sizes.

Sprockets

Standard sprockets for Stainless Steel chains can be used since the dimensions are the same as standard roller chains.

Caution

- ①As a general property of stainless steel, stress corrosion cracking and pitting corrosion can be caused by chlorine and chlorine ion (Cl⁻).
- ⁽²⁾The chart on right shows the data of tests on the level of corrosion resistance for each medium and does not guarantee the performance of the chains. Please take into consideration the conditions, temperature, level and other overall situation when using.
